

Java File Handling

FileReader • BufferedReader • FileWriter • BufferedWriter

Q1. Read a File Character by Character

Write a Java program using **FileReader** to read a file character by character and display its contents.

Test Case 1

input.txt:
Hello Java

Expected Output:
Hello Java

Test Case 2

input.txt:
Java File Handling

Expected Output:
Java File Handling

Q2. Count Characters in a File

Write a Java program using **FileReader** to count the total number of characters present in a file. Count spaces as characters.

Test Case 1

input.txt:
Hello

Expected Output:
Total Characters = 5

Test Case 2

input.txt:
Hello Java

Expected Output:
Total Characters = 10

Q3. Copy One File to Another

Write a Java program using **FileReader** and **FileWriter** to copy the contents of source.txt into destination.txt.

Test Case 1

source.txt:
Hello Java
Welcome to File Handling

```
Expected destination.txt:
Hello Java
Welcome to File Handling
```

Test Case 2

```
source.txt:
ABC
123
XYZ
```

```
Expected destination.txt:
ABC
123
XYZ
```

Q4. Convert File Content to Uppercase

Using **FileReader** and **FileWriter**, read the contents of a file and write the uppercase version into another file.

Test Case 1

```
input.txt:
Hello Java
```

```
Expected output.txt:
HELLO JAVA
```

Test Case 2

```
input.txt:
Java File Handling
Buffered Reader
```

```
Expected output.txt:
JAVA FILE HANDLING
BUFFERED READER
```

Q5. Read a File Line by Line

Write a Java program using **BufferedReader** to read a file line by line and display each line along with its line number.

Test Case 1

```
input.txt:
Java
Python
C++
```

```
Expected Output:
1: Java
2: Python
3: C++
```

Test Case 2

```
input.txt:
Hello
Welcome
Java Programming
```

```
Expected Output:
1: Hello
2: Welcome
3: Java Programming
```

Q6. Count Number of Lines

Write a Java program using **BufferedReader** to count the number of lines present in a file.

Test Case 1

```
input.txt:
Java
Python
C++
```

```
Expected Output:
Total Lines = 3
```

Test Case 2

```
input.txt:
Apple
Banana
Mango
Orange
Grapes
```

```
Expected Output:
Total Lines = 5
```

Q7. Write Data Using BufferedWriter

Write a Java program using **BufferedWriter** to create a file and write student information into it.

Test Case 1

Input:
Rahul
20
B.Tech

Expected file:
Name: Rahul
Age: 20
Course: B.Tech

Test Case 2

Input:
Priya
21
BCA

Expected file:
Name: Priya
Age: 21
Course: BCA

Q8. Copy File Line by Line

Write a Java program using **BufferedReader** and **BufferedWriter** to copy a file line by line. Do not use **FileInputStream** or **FileOutputStream**.

Test Case 1

source.txt:
Java is easy.
Java is powerful.

Expected destination.txt:
Java is easy.
Java is powerful.

Test Case 2

source.txt:
Hello
This is a test file.
Good Morning

Expected destination.txt:
Hello
This is a test file.
Good Morning

Q9. Count Words in a File

Using **BufferedReader**, write a Java program to count the total number of words present in a text file. Words are separated by spaces.

Test Case 1

input.txt:
Java is easy

Expected Output:
Total Words = 3

Test Case 2

input.txt:
Java is easy
Java is powerful

Expected Output:
Total Words = 6

Test Case 3

input.txt:
Hello World
Welcome to Java Programming

Expected Output:
Total Words = 6

Q10. Search for a Word in a File

Using **BufferedReader**, write a Java program that searches for a given word in a file and prints the line numbers where the word occurs.

Test Case 1

```
input.txt:
Java is a programming language.
Java supports OOP.
Python is also a programming language.
Java is platform independent.
```

Search word: Java

```
Expected Output:
Java found at line 1
Java found at line 2
Java found at line 4
```

Test Case 2

```
input.txt:
Hello World
Java is easy
Python is easy
Java is powerful
```

Search word: Java

```
Expected Output:
Java found at line 2
Java found at line 4
```

Test Case 3

Search word: C++

```
Expected Output:
Word not found
```
