

Java Constructors Assignment

Book Management System (Constructors + Static Variables + Static Methods)

Problem Statement

Create a Java class named **Book** with the following requirements:

1. Instance Variables

- bookId
- title
- author
- price

2. Static Variables

- libraryName (same for all books)
- bookCount (stores the total number of books created)

3. Parameterized Constructor

Initialize all instance variables and increment **bookCount** whenever a new Book object is created.

4. Non-Static Method

Create a method **displayBook()** to display the details of a book.

5. Static Methods

- displayLibraryName() – prints the library name.
- displayBookCount() – prints the total number of books created.

6. Main Method

- Set the library name.
- Create three Book objects using the constructor.
- Display details of all books.
- Display the library name.
- Display the total number of books created.

Sample Output

Library Name: City Central Library

Book ID : 101

Title : Java Programming

Author : James Gosling

Price : 650.0

Book ID : 102

Title : Clean Code

Author : Robert C. Martin

Price : 799.0

Book ID : 103

Title : Effective Java

Author : Joshua Bloch

Price : 899.0

Total Books Created : 3
